

LINE OF FIRE SAFETY

STORED ENERGY

Stored Energy is “pent up” and can be in many forms such as electrical, pneumatic, hydraulic, gravity, or mechanical. It can be tricky because it is generally silent and unmoving until released.

How do I protect my future yourself?

Always perform safe work planning before starting any job (and when the conditions change). Be sure to consider the line of fire hazards associated with the tasks and put **observable controls** in place.

Ask yourself...

- What stored energy is present in my work area?
- What can I put in place to prevent it from releasing in a harmful way?

Hazard Assessment and Control Processes

- ① Remove or significantly reduce the hazard where possible.
- ② Create a barrier to prevent yourself from reaching the hazard.
- ③ Develop safe work habits to prevent yourself from moments of inattention.
- ④ Wear the proper PPE as a last line of defense.
